

Assembly Instructions

Your bicycle will be delivered in a compact form to minimise delivery costs and environmental impact. You will need to carry out some very simple assembly prior to use.

The handlebars will need to be turned through 90° to the normal riding position. You will need some Allen (hex) keys. Typically 4mm and 6mm sizes.

The pedals will require fitting. Please remember that the threads are different for each side. Ensure the correct pedal is fitted and do not force the threads, they should assemble easily. Tighten with an appropriate spanner. (15mm).

Ensure that all fasteners are tight and secure and that all controls operate freely and correctly. Ensure that the tyres are inflated to the correct pressure. Check the operation of brakes and gears before every use. If you are not confident in your mechanical abilities then have your bicycle checked by a competent bicycle mechanic such as your local bicycle shop.

With correct care and maintenance your Lindsey-West electric bicycle will provide many years of reliable service.

L-W 001

The Lindsey-West Bicycle Company Limited has its bicycles produced by Baltik Vairas in Lithuania.

BV have decades of experience in producing bicycles of all kinds including electric. All of the bikes conform to the latest standards and our electric bikes are certified to EN 15194. The system used is the BV-F02 Drive Unit which is well proven across Europe. This manual is generic for all models which use this system and detail may differ slightly to the components fitted to the L-W 001.

The warranty for Lindsey-West also differs in that we give a longer period than detailed in this manual. Cycle parts, motor, electronics & battery are covered for 2 years from date of purchase, and the frame for 3 years. Warranty is not transferrable and covers manufacturing and material defects only (subject to normal wear & tear considerations).
